

tracknstop™

Complete Vehicle Fleet Security 24/7 x 365
Cloud Software to Monitor & Manage Your Vehicles

TNS-Shield Data Sheet

Overview:

TNS Shield™ is a fully secure, managed software platform designed to provide real-time vehicle tracking and unparalleled security features to fleets of any size. The software is purpose built to seamlessly integrate with the TNS Hardware products.

TNS Shield™ is a cloud-based solution, meaning the setup, maintenance and security features are managed by TracknStop™ in partnership with Google Cloud Platform, providing peace of mind to you and your customers.

Every client is assigned their own private database within Google Cloud for Centralized data storage and also have the option of distributing their tracking data across multiple nodes so that they are guaranteed that their highly sensitive data cannot be modified in any way.

Our patented technology can remotely stop a moving vehicle safely within seconds. We allow vehicle owners to securely send a 'stop' command to any TracknStop™ fitted vehicle. This command will intelligently stop the vehicle in the event of vehicle hijack, theft or where a vehicle is being used in a dangerous or unlawful situation.

Software Features:

- Patented 'Safe-Stop'
- Remote Starter Disable
- Real-time Vehicle Tracking
- Live Map
- Smart Clustering
- Location and Event History Report
- Motion Alerts
- Unlimited Geo-Fences
- Geo-Fence IN with Patented 'Safe-Stop'
- Geo-Fence OUT with Patented 'Safe-Stop'
- Day/Time/Speed based Geo-Fences
- Privacy Mode
- Notifications
- Admin Control Panel

Optional Features:

- Software customized to fit your brand
- Engineers Installation console
- Global version available
- Customers 'view only' access

Highlighted Features: Live Mapping

The live fleet map provides a detailed overview of your entire fleet at a glance.

From here you can monitor, stop and start vehicles in the field as well as configure alerts and geofences.

- 1 to 500,000 vehicles monitored
- Real-time live map
- Smart clustering
- Track a single vehicle with one click
- Search for specific locations, landmarks, etc
- Manage alerts & notifications
- Detailed reporting
- Speed limit violation

Highlighted Features: Geo-Fencing

Create geofences 'on-the-fly' with simple point-to-point map clicks.

Vehicle owners and law-enforcement authorities are capable of creating customized 'geo-fences' around specific locations (for example depo, garage, tourist area, busy attraction). Should one of their vehicles pass through this geo-fence, without prior clearance, the vehicle will stop within seconds.

- Create unlimited geofences
- Alerts if vehicle enters or leaves a geofence
- Assign vehicles to certain zones
- Geofence IN with Patented Safe-Stop
- Geofence OUT with Patented Safe-Stop
- Day/Time/Speed based geofences

TNS-Shield Data Sheet

Highlighted Features: **Safe-Stop**

Our patented technology can remotely stop a moving vehicle safely within seconds. We allow vehicle owners to securely send a 'stop' command to any TracknStop™ fitted vehicle.

This command will intelligently stop the vehicle in the event of vehicle hijack, theft or where a vehicle is being used in a dangerous or unlawful situation.

- Stop a moving vehicle safely and securely
- Stop a moving vehicle entering/leaving a geofence area

Once the vehicle has been secured the stop command can be withdrawn and the vehicle can be started and driven immediately.
